Why should I use a mask?

Masks perform accelerated cleansing, toning and moisturizing all in one. They add moisture or absorb oils from the skin, and help refine the appearance of pores, dissolve impurities and tone the skin. The result is a soft, smooth complexion with improved texture and tone. It is a good idea to always follow your mask with a moisturizer or night cream to help maintain a healthy moisture balance.

How long should I leave Herbalife® SKIN Purifying Mint Clay Mask on for maximum benefit?

You should leave your Herbalife® SKIN Purifying Mint Clay Mask on for at least 5 minutes, and up to 10 minutes for maximum benefit.

How do I apply eye products?

Always apply your Herbalife® SKIN eye products using your ring finger only. This is the weakest finger on the hand and therefore provides the gentlest application. You never want to tug or pull the delicate skin around the eye area. Gently pat the product into the skin around the eye area, starting about a half inch below the eye.

What is the difference between an eye gel and an eye cream?

An eye gel is generally used during the day to help revive the under eye area, providing a wonderful cooling effect that refreshes and energizes the delicate skin. The Herbalife SKIN Firming Eye Gel helps increase your skin's elasticity. An eye cream can be used during the day or night, but is generally applied at bedtime. Richer in texture than an eye gel, eye creams provide extra moisture and vitamins. Try Herbalife SKIN Firming Eye Gel and Hydrating Eye Cream for great results.
